

**Amendments to the Specification:**

Please replace the paragraph, beginning at page 6, line 15, with the following rewritten paragraph:

In Fig. 1, the embodiment shown is provided with stopper 29 at one location for each terminal 30. However, stoppers may be provided at two or more locations, for instance as shown in Fig. 3B, wherein stoppers 2929' are formed at two confronting sides of the metal that constitutes terminal 30. This structure further reduces the possibility of the stoppers to get deformed.
